Let's Start!

Pronunciation Spot: He screamed with delight after his accomplishment!

Learning Outcome

Identify and describe rules and obligations through a wider range of language and expressions in both work and social contexts.

Can Do Statements

- I can talk about rules, crimes and punishment.
- I can say and use words like *scream*.
- I can use proper intonation and stress in long statements.

Ask your partner:

- Do you like to watch TV crime shows? Why or why not?
- Are there any famous detectives in your country? Why have they become famous?

Let's Explore!

What do you know about **fingerprinting***?

* "Fingerprinting" here is a gerund. We use gerunds as nouns sometimes.

Instructions: Read the text aloud.

Fingerprinting

Fingerprinting has been one of the most sophisticated techniques used to screen for, discriminate between and identify guilty persons. However, this technique is not new. It was known thousands of years ago. The first people to use fingerprints for identification were the ancient Assyrians and Chinese, who used fingerprints to sign important documents.

The first modern study of fingerprints was made by Johannes Purkinje, a Czech physiologist. Sir Francis Galton, a British scientist, developed his own system of classifying fingerprints using all ten fingers and ascribing them to their "owners". Sir Francis' system is the basis of the screening system used today.

The first practical use of fingerprints to identify criminals was in Bengal, India, in the 1890s. This was developed by Sir Edward Richard Henry, a police official. In 1901 he screamed with delight when he created the world's first database of fingerprints.

Today, the use of fingerprints is prescribed around the world. Whenever a person touches any hard, smooth object, a fingerprint made by the oil in the skin is left as if the person had made an inscription on the surface. These prints, which cannot be seen by the naked eye, can be detected using powder or special lights. Police are trained to discover fingerprints on almost any surface. These prints are invaluable in the detection and capture of criminals.

Let's Practice!

Fingerprinting is so interesting!

Instructions: Read the text below and circle the mistakes you find.

1. The first people to use fingerprints for identification were the ancient Assyrians and Chinese, who used fingerprints to sign important documents.
2. Fingerprinting has been one of the most sophisticated techniques used to screen for, discriminate between and identify guilty persons.
3. Whenever a person touches any hard smooth object, a fingerprint made by the oil in the skin is left as if the person had made an inscription on the surface.

Let's Practice!

Let's learn more about fingerprinting!

Instructions: Choose the correct option to complete each sentence.

1. Fingerprinting has been a valuable tool used to **(screen / sheen)** for guilty persons.
2. A British **(physiologist / psychologist)** developed his own system of classifying fingerprints using all ten fingers and ascribing them to their "owners".
3. Today, the use of fingerprints is **(promised / prescribed)** around the world.
4. A fingerprint made by the oil in the skin is left as if the person had made an **(inscription / inception)** on the surface.
5. These prints are invaluable for **(disseminating / discriminating)** between guilty and innocent people.

Extension Activity

Practice your pronunciation of **scr** sound.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- With a partner, make a list of all the words you can think of with the *scr* sound.
- Write a story using as many of your *scr* words as possible.
- Practice reading your story aloud to your partner.
- Listen to your partner read the story and help with pronunciation.
- Exchange stories with another pair of students and practice reading their story aloud.

Self-Assessment

Yes **No**

I talk about rules, crimes and punishment.

☐ ☐

I say and use words like *scream*.

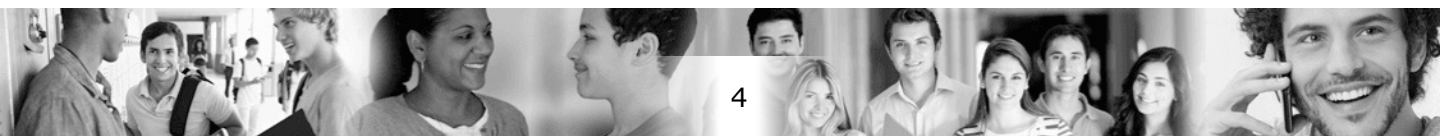

☐ ☐

I use proper intonation and stress in long statements.

☐ ☐

Target Words

- to screen** (verb): to exclude someone or something after evaluation or investigation
e.g. Fingerprinting has been one of the most sophisticated techniques used to screen for guilty persons.
- to discriminate (between)** (verb): to differentiate; to recognize differences
e.g. Fingerprinting has been one of the most sophisticated techniques used to discriminate between guilty persons.
- physiologist** (noun): a person who studies the functions of the body
e.g. The first modern study of fingerprints was made by Johannes Purkinje, a Czech physiologist.
- to ascribe** (verb): to attribute something to a cause or origin
e.g. Sir Francis Galton developed his own system of classifying fingerprints using all ten fingers and ascribing them to their "owners".
- official** (noun): a person holding public office or having official duties
e.g. Sir Edward Richard Henry was a police official.
- database** (noun): a collection of information
e.g. He created the world's first database of fingerprints.
- to prescribe** (verb): to recommend
e.g. Today, the use of fingerprints is prescribed around the world.
- inscription** (noun): words written on a surface
e.g. A fingerprint made by the oil in the skin is left as if the person has made an inscription in the surface.
- powder** (noun): fine dry particles produced by the grinding or crushing of a solid substance
e.g. These prints, which cannot be seen by the naked eye, can be detected using powder or special lights.

Learning Points

The Consonant Blend /scr/

Consonant blends are sounds that consist of two or more consonants. They are said together. Sometimes, this can be quite challenging for non-native speakers.

The consonant blend /scr/ consists of three sounds that are said one right after the next.

/s/ + /k/ + /r/

Say each of these sounds out loud.

Then, say them one right after the next.

Concentrate on what your tongue, teeth and lips are doing.

Practice saying these words:

screen

scream

discriminate

ascribe

inscription

prescribe

Learning Points

Breaking Sentences into Parts

When you read or speak in English, you often "chunk" or break the sentence into parts based on the meaning contained in each part.

For example, look at the the sentence:

The first people to use fingerprints for identification were the ancient Assyrians and Chinese, who used fingerprints to sign important documents.

This sentence could be chunked or broken into the following parts:

*The first people
to use fingerprints for identification
were the ancient Assyrians and Chinese,
who used fingerprints
to sign important documents.*

Examples:

- *Whenever a person touches any hard, smooth object, // a fingerprint made by the oil in the skin // is left as if the person has made // an inscription in the surface.*
- *Sir Francis Galton, // a British scientist, // developed his own system // of classifying fingerprints // using all ten fingers // and ascribing them to their "owners".*
