Let's Start!

I find you guilty!

Learning Outcome

Identify and describe rules and obligations through a wider range of language and expressions in both work and social contexts.

Can Do Statements

- I can talk about rules and regulations.
- I can talk about crime and punishment.
- I can talk about things I have done or have been doing.

Ask your partner:

- Have you heard of any interesting crime stories in the news recently?
- What happens to computer hackers who are caught in your country?

Let's Explore!

A billion dollars in **damage***? What happened?

* "Damage" does not have to be physical. It can refer to financial damage as well.

Instructions: Read the text aloud.

Computer Whiz Tried

Brian Jones (25), a talented young computer programmer, has been tried and found guilty of computer virus crimes by a US court. Jones has been made to pay \$10,000 and may not leave the country for three years. His actions must be reported to his probation officer during that period. The story has been garnering a lot of attention recently.

It began when Jones developed and spread a computer virus called the "Spider Web". He claimed that he wanted to show that computer networks could be easily infected. However, his "Spider" program reproduced much faster than Jones had expected. It caused over a billion dollars in damage by causing many computer systems to crash.

Although the court wanted to make Jones pay for the damage he had done, the existing laws did not allow him to be punished. These laws, as written, had to be applied only to criminals who intentionally caused destruction by viruses. Jones, on the other hand, has claimed that he had not meant to cause damage. In his words, it was all an "unfortunate accident".

The case was brought before the US Supreme Court, which decided that computer criminals should be punished if they caused damage, intentionally or unintentionally. The new laws have been causing "computer geniuses" to think twice before they create and spread viruses.

Let's Practice!

What has Brian Jones done? Is he a hacker*?

*To hack means to enter someone's computer to do something illegal. A "hacker" is a person who commits this crime.

Instructions: Choose from the words below to complete the sentences.

Word Bank

has claimed / have been causing / has been / has been reproducing / has paid

1. The story _____ garnering a lot of attention recently.
2. However, his "Spider" program _____ much faster than Jones had expected.
3. Jones _____ \$10,000 and may not leave the country for three years.
4. Jones, on the other hand, _____ that he had not meant to cause damage.
5. The new laws _____ "computer geniuses" to think twice before they create and spread viruses.

Let's Practice!

What do you think should happen to Brian Jones?

Instructions: Organize the words to find the mystery sentence.

1. that / probation / must / period. / to / actions / officer / His / be / during / reported / his

2. computer / networks / infected / He / to / that / show / he / claimed / easily / wanted / be / that / could

3. unintentionally. / Computer / criminals / damage, / should / be / punished / or / they / caused / if / intentionally

4. From / viruses. / protected / should / computers / be

Extension Activity

Write about which website you would hack into.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Imagine that you are a computer hacker.
- What website would you hack into and why?
- Write a list of websites you would like to hack.
- Share your list with a partner. Do you have any of the same sites?

Self-Assessment

Yes

No

I talk about rules and regulations.

☐ ☐

I talk about crime and punishment.

☐ ☐

I talk about things I have done or have been doing.

☐ ☐

I share my ideas with my partner.

☐ ☐

Target Words

- **whiz** (noun): genius
e.g. A computer whiz was tried for computer crimes.
- **to be tried** (verb): to be brought to court for criminal charges
e.g. A talented young computer programmer has been tried for computer crimes.
- **guilty** (adjective): responsible for a crime
e.g. A computer programmer has been found guilty of computer crimes.
- **to crash** (verb): to fail suddenly (when talking about computers)
e.g. It caused over a billion dollars in damage by causing many computer systems to crash.
- **to garner** (verb): to gather or collect
e.g. The story has been garnering a lot of attention recently.
- **destruction** (noun): damage
e.g. These laws had to be applied only to criminals who intentionally caused destruction by viruses.
- **to think twice** (expression): to consider a course of action carefully before doing it
e.g. The new laws have been causing "computer geniuses" to think twice before they create and spread viruses.
- **to reproduce** (verb): produce again
e.g. His "Spider" program reproduced much faster than Jones had expected.
- **existing** (adjective): current
e.g. The existing laws did not allow him to be punished.

Learning Points

Modal Verbs in the Passive Voice

You use modal verbs to add meaning to other verbs. They come before the dictionary form (Infinitive without 'to') of the main verb. Modal verbs can add meaning connected with certainty or obligation.

You can use modal verbs in the passive voice.

You use the passive voice when you want to focus on the receiver of the action, rather than the 'doer' of the action.

Here is the structure of a passive sentence:

Subject + To be + past participle

For example:

*Computer networks **are** easily **infected** by viruses.*

You can add a modal verb before the *To be*.

Subject + modal + To be + past participle

For example:

*Computer networks **can be** easily **infected** by viruses.*

Here the sentence now has an additional meaning of possibility, thanks to the modal **can**.

Examples:

- *His actions **must be** reported to his probation officer during that period.*
- *He claimed that he wanted to show that computer networks **could be** easily infected.*
- *These laws, as written, **had to be** applied only to criminals who intentionally caused destruction by viruses.*

Learning Points

The Present Perfect Continuous Tense vs. Present Perfect Tense

You use the Present Perfect Continuous tense to talk about an action that began in the past and is still continuing at the present time.

You use the Present Perfect tense to talk about a past action that has a connection to the present time. The action either finished in the past, just recently finished or, in some cases, continues to the present time.

The main difference between these two tenses is that you use the Present Perfect Continuous when you want to emphasize that the action began in the past and **is still continuing now**.

Some verbs are NOT used in the continuous form. Some common examples are: *to be*, *to have* and *to know*.

You often use the Present Perfect Continuous with words that talk about a period of time continuing up to the present, like *recently*, *this week*, *since March*, *for the last two days*.

Examples:

- *A talented young computer programmer has been tried and found guilty of computer virus crimes by a US court.*
- *Jones has been made to pay \$10,000.*
- *The story has been garnering a lot of attention recently.*
- *Jones, on the other hand, has claimed that he had not meant to cause damage.*
- *The new laws have been causing "computer geniuses" to think twice before they create and spread viruses.*
