Let's Start!

What is genetic fingerprinting?

Learning Outcome

Identify and describe rules and obligations through a wider range of language and expressions in both work and social contexts.

Can Do Statements

- I can talk about rules and regulations.
- I can talk about crime and punishment.
- I can talk about things I had done before or things that had happened before.

Ask your partner:

- How much do you know about what police do to solve crimes?
- Are you interested in reading about crime? Why or why not?

Let's Explore!

Let's read about technology and crime. How has technology changed to help police?

Instructions: Read the text aloud.

Crime and Technology

Around 1910, a Frenchman named Edmond Locard noticed that criminals always left clues at the scene of the crime. Until recently, detectives had used a limited number of tools to help them solve crimes. Advances in technology have made their work much easier.

Fingerprints found at the scene of the crime had been the most important clues to a criminal's identity before "genetic fingerprinting" was introduced. This technique is used by police around the world. DNA makes us similar to our parents. In every person, this genetic code is different. DNA is contained in every cell of the body.

People can be identified by a hair or a tiny spot of blood, using this process. By using another process called "neutron-activation analysis," a hair from the murder victim's head can show if he or she had been drugged or poisoned. The biggest contribution to crime detection has been made by the computer. Suspects are found by the police quickly scanning large amounts of information.

A criminal's car can also be identified by studying pieces of glass or paint found at the scene of the crime. The police still use Locard's idea of searching for clues, but today they can catch criminals by using these clues in much more efficient ways.

Let's Practice!

Let's talk about crime.

Instructions: Match each word in the left with its correct definition in the right.

- | | |
|-------------------|--|
| 1. Blood | a. a person thought to be guilty of a crime. |
| 2. Suspect | b. using a person's genetic material to identify them. |
| 3. Efficient | c. a device use to carry out a function. |
| 4. Clue | d. the red liquid that circulates in animals. |
| 5. Generic | e. a piece of evidence or information. |
| 6. Fingerprinting | f. well-organized, competent. |

Let's Practice!

What do the police do?

Instructions: Match the sentences on the right with their missing part on the left.

- | | |
|--|---|
| 1. This technique is used ... | a. by scanning large amounts of information. |
| 2. People can be identified ... | b. a hair from the murder victim's head can show if he or she had been drugged or poisoned. |
| 3. By using another process called "Neutron Activation Analysis" ... | c. by police around the world. |
| 4. Suspects are found ... | d. by a hair or a tiny spot of blood. |

Extension Activity

Talk about different types of crime.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Brainstorm words for different crimes and write them down.
- Put them in order from least serious to most serious.
- Compare your list with a partner and discuss any differences.

Self-Assessment

Yes

No

I talk about crime and punishment.

☐ ☐

I talk about rules and regulations.

☐ ☐

I put crimes in order from least to most serious.

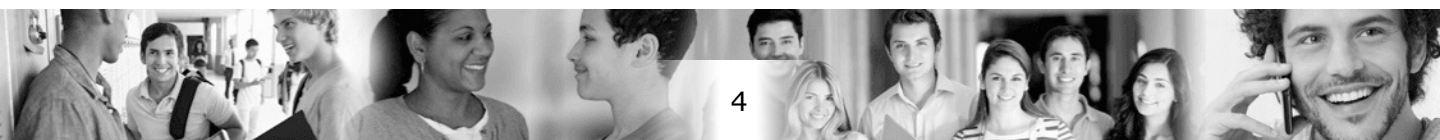

☐ ☐

I discuss my opinion about crime with my partner.

☐ ☐

Target Words

- **clue** (noun): an object or information that helps you solve a mystery or a crime
e.g. A Frenchman named Edmond Locard noticed that criminals always left clues at the scene of the crime.
- **limited** (adjective): restricted in amount
e.g. Until recently, detectives had used a limited number of tools to help them solve crimes.
- **tool** (noun): a device used to carry out a particular function
e.g. Detectives now have many tools to help them.
- **genetic fingerprinting** (noun): using a person's genetic material to identify them
e.g. Fingerprints had been the most important clues to a criminal's identity before "genetic fingerprinting" was introduced.
- **molecule** (noun): a group of atoms bonded together
e.g. DNA is a molecule that makes us similar to our parents.
- **code** (noun): information in the form of letters, numbers or pictographs that help you identify or classify something
e.g. In every person, the genetic code is different.
- **blood** (noun): the red liquid that flows through the body and carries oxygen
e.g. People can be identified by a hair or a tiny spot of blood.
- **suspect** (noun): a person thought to be guilty of a crime
e.g. Suspects are found by the police quickly scanning large amounts of information.
- **efficient** (adjective): well-organized, competent
e.g. Today police can catch criminals by using these clues in much more efficient ways.

Learning Points

The Past Perfect Tense

You use the Past Perfect tense to identify and talk about an 'earlier past'.

When you are talking about a past event, you can refer to something that happened at an earlier time to that past event by using the Past Perfect tense.

The structure of the Past Perfect is:

Subject + had + past participle

*When I arrived at the party, Vanessa **had** already **gone** home.*

Which event happened *first*? Vanessa went home.

Which event happened *later*? I arrived at the party.

You use the Past Perfect tense (not Simple Past) when you want to talk about how long something had continued **up to a past moment**.

*Until recently, detectives **had used** a limited number of tools to help them solve crimes.*

Detectives used a limited number of tools from the past until recently.

Examples:

- *Fingerprints found at the scene of the crime had been the most important clues to a criminal's identity before the introduction of "genetic fingerprinting".*
- *By using another process called "neutron-activation analysis," a hair from the murder victim's head can show if he or she had been drugged or poisoned.*

Learning Points

The Simple Present Passive

You use an active structure when you want the 'doer' of the action to be the subject.
You use a passive structure when you want the 'receiver' of the action to be the subject.

Active sentence = People (subject) **consider** murder (object) to be the most serious crime.

Passive sentence = Murder (subject) **is considered** to be the most serious crime (by people).

It is not necessary to mention the object in a passive sentence.

You make the passive form of a verb by using tenses of the *be* verb followed by the past participle.

The Simple Present passive form is:

am/are/is + past participle

For example:

*English **is spoken** in the United States.*

Examples:

- *This technique is used by police around the world.*
- *People can be identified by a hair or a tiny spot of blood.*
- *Suspects are found by the police quickly scanning large amounts of information.*
- *A criminal's car can also be identified by studying pieces of glass or paint found at the scene of the crime.*
